Analytical Data Analyst with hands-on experience in Python, SQL, and BI tools. Skilled in data cleaning, validation, exploratory analysis, and visualization. Experienced in auditing large datasets, building automation scripts, and generating actionable insights. Strong ability to handle end-to-end data tasks, collaborate with cross-functional teams, and support ML data pipelines.

EXPERIENCE

Data Analyst — Hive

October 2025 – Present

- Performed data validation, anomaly detection, and quality audits on large AI/ML datasets using Python and SQL.
- Identified inconsistencies, labelling gaps, and data-quality risks through rule-based checks and statistical profiling.
- Supported ML data pipelines by improving dataset accuracy, maintaining QA standards, optimizing audit workflows, and coordinating tasks within structured sprint-style cycles.

Python Developer Intern — Cipher Byte Technologies

Aug 2024 – Sept 2024

- Built automation tools using Python, applying pandas for structured data handling and integrating basic matplotlib diagnostics to validate outputs.
- Developed clean scripting logic and lightweight GUI workflows, improving task speed and reducing manual effort while following standard software development practices.

PROJECTS

Booking Channel Analysis

- Performed a comprehensive analysis of hotel booking data using Python, Pandas, and NumPy to identify key business trends and insights.
- Developed visualizations with Matplotlib and Seaborn to present actionable strategies for revenue optimization and customer retention.
- Delivered a data-driven report that supported strategic decision-making by uncovering significant booking patterns and customer behaviours.

Zomato Data Analysis

- Analysed Zomato restaurant dataset using Python to extract key business insights in the food industry.
- Explored trends in online vs offline delivery, popular restaurant types, and preferred pricing for couples.
- Performed data cleaning, visualization, and statistical analysis using Pandas, Matplotlib, and Seaborn.
- Delivered data-driven insights to support strategic decisions in customer targeting and service offerings.

Recommendation System

- Developed a Recommendation System in Python using content-based and collaborative filtering techniques.
- Implemented personalized suggestions based on user preferences to enhance user engagement.
- Demonstrated use cases aligned with real-world platforms like Netflix and Amazon to simulate recommendation workflows.

SKILLS

Workflows: Familiar with Agile/Scrum-style collaboration, iterative development, and cross-functional sprint alignment.

Programming: Python, SQL (MySQL, PostgreSQL)

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn (basics)

BI & Tools: Power BI, Excel, Tableau (basic), Jupyter Notebook, VS Code

Other: Process Optimization, Requirement Analysis, Quality Assurance for ML Data, Data Cleaning, EDA, Data Validation, Reporting, A/B Analysis, KPI Tracking, Documentation

CERTIFICATIONS

- Python Bootcamp - Udemy
- Data Science Training - Internshala
- Data Analysis Training - ICT Academy

EDUCATION

Bachelor of Computer Applications (7.8 CGPA)

Sept 2022 – May 2025

Institute of Management Education, Ghaziabad

12th Commerce (8.8 CGPA)

April 2019 – May 2021

Central Board of Secondary Education, Delhi
