Data Analyst who turns messy numbers into clear business answers. I find the stories hiding in data, whether it's spotting why customers leave, catching fraud before it happens, or discovering which sales strategies actually work. My superpower is translating complex data into simple insights that help businesses make smarter decisions and see real results.

EXPERIENCE

Data Analyst — Hive

October 2025 – Present

- Performed data validation, anomaly detection, and quality audits on large AI/ML datasets using Python and SQL.
- Identified inconsistencies, labelling gaps, and data-quality risks through rule-based checks and statistical profiling.
- Supported ML data pipelines by improving dataset accuracy, maintaining QA standards, optimizing audit workflows, and coordinating tasks within structured sprint-style cycles.

PROJECTS

Booking Channel Analysis

- Analysed booking data to understand which channels brought in the most revenue and which needed improvement.
- Created dashboards showing booking trends that helped the revenue team identify 18% improvement opportunities in seasonal bookings.
- Provided clear insights on customer booking behaviours that guided marketing strategy and budget allocation.

Customer Churn Analysis

- Identified why customers were leaving the business by analysing their usage patterns and behaviours.
- Found that customers with certain usage patterns were 40% more likely to leave, helping the business focus on keeping these customers.
- Created clear reports showing which customer groups needed attention, helping reduce customer loss by targeting at-risk users.

Operational Analytics & Market Segmentation Platform

- Cleaned and organized 50,000+ restaurant records to make the data useful for business decisions.
- Found high-value customer segments based on restaurant type, delivery method, and price range, improving targeting efficiency by 20%.
- Helped the business understand customer preferences and make better decisions about which restaurants and services to promote.

SKILLS

MIS & Reporting Tools: Microsoft Excel (Advanced: Pivots, VLOOKUP, What-If Analysis, Macros), Power BI (Dashboard Development, DAX), SQL (MySQL, PostgreSQL)

Programming & Automation: Python (Pandas, NumPy, Automation Scripts), SQL Query Optimization, Data Validation Logic

Data Management: Data Quality Assurance, ETL Processes, Data Cleaning & Transformation, Database Management, Data Reconciliation

Business Intelligence: KPI Development & Tracking, Dashboard Design, Operational Reporting, Trend Analysis, Statistical Profiling

Process Optimization: Workflow Automation, SOP Documentation, Requirements Gathering, Stakeholder Communication, Exception Handling

CERTIFICATIONS

- Data Analysis Training - ICT Academy
- Data Science – Aciojob
- Data Science Training – Internshala
- Python Bootcamp - Udemy

EDUCATION

Bachelor of Computer Applications (7.8 CGPA)

Institute of Management Education, Ghaziabad

Sept 2022 – May 2025
